by ForeverLawn®

# ACCESSIBLE PLAY FOR ALL KIDS

Playground Grass™ is making play accessible for all kids. Crafted with careful considerations and components, Playground Grass products are designed to foster community for children of all ages and abilities. Firm and stable, our synthetic grass surfacing is ADA accessible and antistatic — ensuring no kid is left behind.

Playgrounds are often designed for children without disabilities, utilizing loose-fill rubber mulch or engineered wood fiber (EWF) in order to lower costs. These surfacing options do nothing to solve the issues plaguing modern playgrounds—such as longevity, cleanliness, and utility— and often hinder safety and accessibility rather than improve them.

# “Accessibility is the top feature of Playground Grass. Hands down.”

Shane Hamilton, Director of Parks & Facilities, Carol Stream Park District

By considering aspects such as wheelchair accessibility, antistatic accommodations, and sensory engagement, Playground Grass products create spaces where all children can experience free, creative play together. With Playground Grass, inclusion, safety, and quality play become the foundational aspects on your park or playground — creating space for kids to build diverse, lasting friendships.

Include Playground Grass in your next play space design — it's what kids were meant to play on!

**“I was never in this world [of accessibility] until I had a child with special needs... turf is just simply the better solution for any individual with a mobility issue.”**

Shane Hamilton, Director of Parks & Facilities, Carol Stream Park District

**“We’re seeing a trend of people looking at alternative surfaces—mainly synthetic turf products—because they are very accessible and add sensory elements.”**

Chris Leiner, Director of Parks & Properties, Greater Chicago Area
